

I believe, engineers can make a beautiful design. I'm an iOS/macOS developer by the background and also make all the designs in my company. Mostly I focus on the product design: depending users' needs, finding the best solutions, initial prototyping, UX flow, screens. It's all about making usable products and experiences. Sometimes, I need to work with marketing design: banners for Christmas, gifs for Black Friday deals, illustration for our open-sources projects (like Awesome Design Tools) or new visuals to test on our marketing landing page. Luckily, I can grab some free SVG images & illustrations from very kind and talented people in our community. Then make custom changes and use them. Thanks to all those designers, who allow engineers like me to overcome the struggle with creating custom illustrations.

I'm sure, readers of Prototypr will find these illustrations sites very useful for the day-to-day work:

Absurd Design

Open Doodles, Humaaans and Buttsss

It's amazing free illustrations by Pablo Stanley. Let's talk more about them.

Open Doodles is a set of hand-drawn vector illustrations. You can download the source files or play with the generator to create your own. While Humaaans is a library to mix-&-match illustrations of people. And you can also customize their positions, clothing, colors, and hairstyle. Buttsss is the most daring collection of butt illustrations. Just have fun and use them on your pitch deck, presentations or marketing campaigns.
